

Snow Guards & Roof Safety Anchors

Snow retention and fall-protection attachments for metal roofs

Two accessories that keep a metal roof usable: snow guards, which hold snow on the roof so it does not slide off in one sheet, and anchors, which give a person working on the roof something rated to clip to.

Items

Item	Fits	Purpose
Snow guard, clamped	Standing seam profile	Snow retention without penetrating the panel
Snow guard, fixed	Screw-fixed profiles (IBR, corrugated, tile)	Snow retention on through-fastened roofs
Roof anchor (single point)	Various	Fall protection anchor for maintenance access
Snow fence / rail	Various	Continuous retention where sliding must be stopped

Data

Materials	Galvanised or stainless steel; coated to match the roof
Layout	Guard spacing comes from the roof pitch, the snow load and the sliding length — a layout calculation, not a fixed number of rows
Loads	Anchors are rated for a defined fall-arrest load; the rating and the fixing into the structure are both part of the installation

Standards referenced

EN 795 (personal fall protection equipment — anchor devices; the class of the anchor is what matters) · EN 1991-1-3 (snow loads) for the retention design · ISO 1461 (hot dip galvanising) · manufacturer installation guidance governs spacing

Need a quote? Send the roof profile and pitch, the snow load, roof length, and how many anchor points the access plan needs.
